**1 BEGIN**

Begin by attaching the small end of an Iwata airbrush hose (included with some models or sold separately) to your airbrush.

Attach the other end of your airbrush hose to your air source. (Compressor sold separately or included with kits.)

**2 PAINT**

Put paint into the included siphon feed bottle and attach the bottle to the bottom of the airbrush by pushing it into the airbrush. (Bottle does not screw in.)

**3 START AIRBRUSHING**

Turn your compressor on.

Using your index finger for control, push down on the main lever for air and paint flow.

For finer lines, turn the air compressor pressure (psi) down, get close to paint surface and turn fluid adjustment knob to regulate spray pattern. Then push down and pull back on the main lever just a little. Turn fluid adjustment knob while spraying as needed.

**Clean your airbrush between color changes and at the end of your work session.**
